

| Category                      | Audit Item                                  | Page / Scope                  | Status   | Severity | Current Value / Finding                                                                                                                                                                                                                                              | Recommended Fix                                                                                                                                                                                                                | Impact                                                                                                               |
|-------------------------------|---------------------------------------------|-------------------------------|----------|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Canonical & Duplicate Content | Canonical URL Mismatch                      | All Pages                     | CRITICAL | P0       | Canonical tags point to https://electricpe.com/* but the site is live and indexed at https://electric-pe.vercel.app/ (a separate domain). Both domains return 200 OK with index/follow.                                                                              | Either (a) set the Vercel preview to noindex in vercel.json using robots headers, or (b) ensure Vercel domain redirects 301 to electricpe.com. Never serve canonical on a staging domain that Google can crawl.                | Duplicate content split — Google may index Vercel URLs and dilute link equity from electricpe.com                    |
| Canonical & Duplicate Content | Self-Referencing Canonical                  | Homepage                      | WARNING  | P1       | Canonical points to https://electricpe.com (no trailing slash) but OG:url also points to https://electricpe.com (no trailing slash). Verify that electricpe.com itself returns a consistent canonical — with or without trailing slash consistently.                 | Audit all canonical tags to ensure trailing-slash consistency across all pages. Pick one convention (prefer no trailing slash for Next.js) and enforce site-wide.                                                              | Soft duplicate signals if Google crawls both /page and /page/                                                        |
| Meta Tags — Title             | Title Tag Duplicate Brand Suffix            | Homepage                      | FAIL     | P1       | Title: "ElectricPe — Electric Scooters Chargers & 30+ Stores Across India   ElectricPe" — brand name appears TWICE (once in title body via em-dash and once appended by Next.js template with pipe separator). Total ~82 chars — exceeds 60-char SERP display limit. | Remove the appended "  ElectricPe" suffix from the Next.js layout title template for the homepage only (or use a separate title without suffix). Target ≤60 chars: "ElectricPe — Electric Scooters   30+ Stores Across India". | Truncated SERP title reduces CTR; double brand name looks unprofessional                                             |
| Meta Tags — Title             | Title Tag Duplicate Brand Suffix            | Blog Index                    | FAIL     | P1       | Title: "Blog — EV SCOOPS   ElectricPe   ElectricPe" — ElectricPe appears TWICE. Title template is appending brand name even though page title already contains the brand.                                                                                            | Fix layout template to detect when brand name is already present in the page title and skip the suffix. Target: "EV Scoops — EV Guides & Ownership Stories   ElectricPe".                                                      | Confusing in SERP; wasted title real estate                                                                          |
| Meta Tags — Title             | Title Tag Duplicate Brand Suffix            | Product Page (Xypro)          | FAIL     | P1       | Title: "Xypro Electric Scooter — Most affordable. No licence no registration.   ElectricPe   ElectricPe" — brand name doubled. ~97 chars.                                                                                                                            | Deduplicate brand suffix. Target ≤65 chars: "Xypro Electric Scooter — Licence-Free from ₹35000   ElectricPe".                                                                                                                  | SERP truncation at ~600px pixel width; double brand dilutes keyword signal                                           |
| Meta Tags — Title             | Title Character Length                      | Homepage                      | WARNING  | P1       | Rendered title is ~82 characters — Google typically truncates around 600px (~60 chars). The primary value prop is cut off in most SERPs.                                                                                                                             | Shorten title to 50–60 characters. Include primary keyword (electric scooter India) in first 40 characters.                                                                                                                    | Lower organic CTR due to title truncation in mobile and desktop SERPs                                                |
| Meta Tags — Description       | Meta Description Length                     | Homepage                      | PASS     | P2       | Description: "Buy low-speed electric scooters from Xypro Jett EP & 4ALL. 30+ Mobility Centers 24-hour service 3-year warranty. Book a free test ride today." — ~149 chars. Within 150–160 char ideal range.                                                          | No change needed. Monitor for Google auto-rewriting.                                                                                                                                                                           | N/A                                                                                                                  |
| Meta Tags — Description       | Meta Description Length                     | Blog Page                     | WARNING  | P2       | Description: "Guides ownership stories and city walkthroughs for Indian EV riders. Written by the ElectricPe team." — ~99 chars. Too short; leaves SERP real estate unused.                                                                                          | Expand to 150–160 chars. Add keyword hooks: "Explore ElectricPe blog — EV buying guides low-speed scooter reviews charging tips and ownership stories for Indian riders. Updated monthly."                                     | Shorter description = less SERP visibility; Google may pull random on-page text instead                              |
| Open Graph                    | OG:title Mismatch on Blog Page              | Blog Index                    | FAIL     | P1       | OG:title is "ElectricPe — Electric Scooters Chargers & 30+ Stores Across India" — this is the HOMEPAGE title not the blog page title. Social shares of /blog will show homepage messaging.                                                                           | Set og:title dynamically per-page in Next.js metadata. Blog: "EV Scoops — Guides & Stories   ElectricPe".                                                                                                                      | Incorrect social preview discourages clicks when blog is shared on WhatsApp/Twitter/LinkedIn                         |
| Open Graph                    | OG:description Mismatch on Blog Page        | Blog Index                    | FAIL     | P1       | OG:description is the homepage description ("Buy low-speed electric scooters...") not the blog description. Completely irrelevant to the blog page.                                                                                                                  | Set og:description per-page. Blog: ""Guides ownership stories and city walkthroughs for Indian EV riders — written by the ElectricPe team.""                                                                                   | Social preview irrelevant to blog content; hurts CTR from social shares                                              |
| Open Graph                    | OG:url Points to Homepage on Blog Page      | Blog Index                    | FAIL     | P1       | og:url: https://electricpe.com — this is homepage URL used on the /blog page. Facebook/LinkedIn will resolve the shared URL as the homepage.                                                                                                                         | Set og:url to the canonical URL of each page (https://electricpe.com/blog for blog etc.).                                                                                                                                      | Social platforms resolve the wrong page for engagement tracking and link credits                                     |
| Open Graph                    | OG:type Set to ""website"" on Product Pages | Product Pages                 | WARNING  | P2       | All pages use og:type: website. Product pages (Xypro Jett etc.) should use og:type: product for richer previews on platforms that support it.                                                                                                                        | Set og:type to product on /ev/* pages. Facebook and Pinterest use this for shopping integrations.                                                                                                                              | Missed opportunity for richer social previews on product/scooter pages                                               |
| Open Graph                    | Missing og:locale:alternate                 | All Pages                     | INFO     | P3       | og:locale is set to en_IN. No og:locale:alternate is declared for Hindi or other Indian regional languages.                                                                                                                                                          | If content is available in Hindi add og:locale:alternate: hi_IN. Otherwise acceptable as-is.                                                                                                                                   | Low priority unless multilingual content is planned                                                                  |
| Structured Data / Schema      | No Product Schema on Product Pages          | /ev/xypro and all /ev/* pages | CRITICAL | P0       | No JSON-LD Product schema detected on any product page. Pages show price (₹35000–₹64999) range model specs and reviews — all ideal for Product schema with Offer AggregateRating and Review markup.                                                                  | Add JSON-LD Product schema on every /ev/[brand]/[model] page. Include: name description image sku offers (price priceCurrency availability) aggregateRating (ratingValue reviewCount) review array.                            | Missing rich results (price stars in SERP) — competitors with Product schema will outrank on visual SERP real estate |

|                          |                                      |                                            |          |    |                                                                                                                                                                                                    |                                                                                                                                                                                                               |                                                                                                       |
|--------------------------|--------------------------------------|--------------------------------------------|----------|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Structured Data / Schema | No LocalBusiness / Store Schema      | /stores and /stores/[city] pages           | CRITICAL | P0 | 30+ physical Mobility Centers have no LocalBusiness or AutoDealer JSON-LD schema. Each store has address hours phone — perfect structured data candidates.                                         | Add LocalBusiness (or AutoDealer subtype) JSON-LD on each store page. Include: name address telephone openingHours geo (lat/lng). Use ItemList schema on the /stores index.                                   | Google Maps integration blocked; missed eligibility for Knowledge Panel and local SERP features       |
| Structured Data / Schema | No FAQPage Schema on Product FAQs    | /ev/xypro (and likely all /ev/* pages)     | HIGH     | P1 | FAQ section visible on Xypro page ("What's the real-world range?" etc.) but no FAQPage JSON-LD schema is present.                                                                                  | Add FAQPage JSON-LD schema wrapping the FAQ section on all product pages. Questions and answers are already in the DOM — just need the structured data layer.                                                 | Missed Google FAQ rich results — FAQ accordions in SERP can triple SERP footprint for product queries |
| Structured Data / Schema | No Organization Schema on Homepage   | Homepage                                   | HIGH     | P1 | No Organization JSON-LD on homepage. Business has name address phone social profiles CIN GST — all appropriate for Organization markup.                                                            | Add Organization schema: name url logo sameAs (social URLs) contactPoint address. This helps Google Knowledge Panel and E-E-A-T signals.                                                                      | Without Organization schema Google has to infer brand identity from unstructured text                 |
| Structured Data / Schema | No BreadcrumbList Schema             | /ev/xypro (product pages with breadcrumbs) | HIGH     | P1 | Breadcrumb navigation is rendered visually (Home > Scooters > Xypro) on product pages but no BreadcrumbList JSON-LD schema is present.                                                             | Add BreadcrumbList JSON-LD for every page that shows breadcrumbs. Next.js has next-seo or manual JSON-LD injection options.                                                                                   | SERP breadcrumb display instead of raw URL improves CTR by ~5–10%                                     |
| Structured Data / Schema | No Article Schema on Blog Posts      | /blog/* posts                              | HIGH     | P1 | Blog posts have author name date and category (e.g. Avinash Sharma · 5 Apr 2026) but no Article or BlogPosting JSON-LD schema.                                                                     | Add Article/BlogPosting schema on each blog post: headline datePublished dateModified author image publisher.                                                                                                 | Misses Google Top Stories eligibility and Discover integration                                        |
| Structured Data / Schema | No SiteLinksSearchBox Schema         | Homepage                                   | INFO     | P3 | No SearchAction/SiteLinksSearchBox schema on homepage. Site has product categories stores and blog that could benefit from site-search SERP feature.                                               | Add WebSite schema with SearchAction pointing to your internal search endpoint (if one exists).                                                                                                               | Low priority — only relevant if site has functional internal search                                   |
| URL Structure            | www vs non-www Consistency           | All Pages                                  | WARNING  | P2 | Canonical tags and OG:url use https://electricpe.com (non-www). Must verify that www.electricpe.com 301 redirects to electricpe.com and that the Vercel deployment follows the same convention.    | Test www.electricpe.com and ensure it issues a 301 to https://electricpe.com. Verify in GSC that preferred domain is set.                                                                                     | Split link equity if both www and non-www serve content without redirect                              |
| URL Structure            | Trailing Slash Convention            | All Pages                                  | INFO     | P3 | Next.js default typically uses no trailing slash. Verify that /ev/ and /ev redirect to consistent canonical. Footer links use no trailing slash which is good.                                     | Run a crawl (Screaming Frog or Sitebulb) to verify all internal links are consistent. Set trailingSlash: false in next.config.js if not already set.                                                          | Soft duplicate issue if Google discovers both /page and /page/ returning 200                          |
| URL Structure            | URL Slug Quality                     | Blog Posts                                 | PASS     | P2 | Blog URLs are clean and keyword-rich: /blog/maximise-electric-scooter-range-indian-summer /blog/xypro-vs-jett-which-fits-your-commute. Good practice.                                              | No change needed.                                                                                                                                                                                             | N/A                                                                                                   |
| URL Structure            | CMS Page Publicly Indexed            | /cms                                       | WARNING  | P2 | The /cms page (B2B) is linked in the footer and appears to be publicly accessible and indexable. This is an internal tool link being served to public users.                                       | Either noindex /cms or remove it from the public footer. Add meta robots: noindex nofollow on the CMS page if it's an internal tool.                                                                          | Dilutes crawl budget; low-quality indexable page signals; confusing to users                          |
| Indexation & Robots      | Vercel Deployment Publicly Indexable | electric-pe.vercel.app                     | CRITICAL | P0 | meta robots on Vercel: index follow. Google is crawling and potentially indexing electric-pe.vercel.app as a duplicate of electricpe.com.                                                          | Add vercel.json headers to serve X-Robots-Tag: noindex on the Vercel domain OR use Vercel's password protection for preview deployments. Never allow production-duplicate deployments to be publicly indexed. | Google splitting ranking signals between two identical domains                                        |
| Indexation & Robots      | Robots.txt Verification              | Root domain                                | UNKNOWN  | P1 | robots.txt could not be verified at electric-pe.vercel.app/robots.txt (access restricted). Must verify robots.txt exists and is correctly configured on both electricpe.com and the Vercel domain. | Manually check https://electricpe.com/robots.txt and https://electric-pe.vercel.app/robots.txt. Ensure Vercel has Disallow: / and production has proper allow rules with sitemap reference.                   | Incorrect robots.txt can block crawling of key pages or allow crawling of duplicate/private pages     |
| Indexation & Robots      | XML Sitemap Verification             | Root domain                                | UNKNOWN  | P1 | XML sitemap could not be verified at electric-pe.vercel.app/sitemap.xml. Next.js can auto-generate sitemaps via next-sitemap package.                                                              | Verify https://electricpe.com/sitemap.xml exists and is submitted to Google Search Console. Include all product pages store pages blog posts in the sitemap with correct lastmod dates.                       | Without sitemap Google relies on crawl discovery alone — new pages may take weeks to index            |
| Indexation & Robots      | meta-googlebot Directives            | All Pages                                  | PASS     | P2 | All pages correctly set: max-video-preview:-1 max-image-preview:large max-snippet:-1. This allows Google full snippet display.                                                                     | No change needed.                                                                                                                                                                                             | N/A                                                                                                   |
| Indexation & Robots      | meta robots on All Key Pages         | All audited pages                          | PASS     | P2 | All pages use index follow — no accidental noindex found on product or blog pages.                                                                                                                 | No change needed. Continuously monitor via GSC Coverage report.                                                                                                                                               | N/A                                                                                                   |
| Mobile & Viewport        | Viewport Meta Tag                    | All Pages                                  | PASS     | P2 | meta-viewport: width=device-width initial-scale=1 maximum-scale=5. Allows user zoom (maximum-scale=5 is accessibility-friendly).                                                                   | No change needed.                                                                                                                                                                                             | N/A                                                                                                   |

|                          |                                               |                             |         |    |                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                       |                                                                                                                    |
|--------------------------|-----------------------------------------------|-----------------------------|---------|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| Mobile & Viewport        | format-detection: telephone=no                | All Pages                   | WARNING | P2 | meta-format-detection: telephone=no is set globally. This disables automatic phone number detection and click-to-call on iOS Safari — potentially hurting mobile conversions for a business where calling is a key CTA. | Remove format-detection: telephone=no OR ensure all phone numbers are wrapped in <a href="tel:..."> links (which they appear to be). With explicit tel: links the format-detection suppression is acceptable.                                                         | If tel: links are present throughout site this is acceptable — verify all phone numbers have explicit tel: anchors |
| Page Speed & Performance | Next.js Image Optimization                    | All Pages                   | PASS    | P1 | Site uses Next.js <Image> component with _next/image?url=... for all images. This enables automatic WebP conversion lazy loading and responsive srcsets.                                                                | No change needed at framework level. Ensure quality parameter is appropriate (hero images at q=95 others at q=75).                                                                                                                                                    | N/A                                                                                                                |
| Page Speed & Performance | Hero Image Quality Setting                    | Homepage                    | INFO    | P3 | Hero image uses q=95 quality (very high). Most hero images are visually acceptable at q=80 reducing file size by ~30%.                                                                                                  | Consider reducing hero image quality parameter to q=80 for large PNG cutout images. Benchmark visually before deploying.                                                                                                                                              | ~20–30% smaller image payload = faster LCP (Largest Contentful Paint)                                              |
| Page Speed & Performance | Duplicate Store Placeholder Images            | /stores section on Homepage | HIGH    | P1 | All 5 Bengaluru store cards use the same placeholder image (/img/home_hero_section_2.webp). This is a missing content quality signal — stores lack individual identity.                                                 | Replace placeholder store images with real Mobility Center photos. Use Next.js Image for each. Alt text should include store name and city.                                                                                                                           | Bad UX; missed opportunity for local SEO image signals; trust factor reduced                                       |
| Page Speed & Performance | Core Web Vitals (CWV) Assessment              | All Pages                   | UNKNOWN | P1 | Cannot measure LCP FID/INP CLS without live tooling. Next.js SSR/SSG typically yields good CWV but client-side JS hydration and large image payloads can hurt LCP.                                                      | Run PageSpeed Insights (https://pagespeed.web.dev) on homepage /ev/xypro and /blog. Target: LCP <2.5s INP <200ms CLS <0.1. Also run in GSC > Core Web Vitals report.                                                                                                  | CWV is a Google ranking factor — poor scores directly reduce organic rankings on mobile                            |
| Image Optimization       | Images Missing Alt Text                       | Homepage (store section)    | FAIL    | P1 | Store listing images in the homepage Mobility Center section have empty alt text (alt=""). e.g. the store card images for all 5 Bengaluru locations.                                                                    | Add descriptive alt text to all store images: alt="ElectricPe Yeswanthpur Mobility Center Bengaluru" etc.                                                                                                                                                             | Missing alt text = accessibility failure + missed image SEO signal for local store pages                           |
| Image Optimization       | Logo Image Alt Text                           | All Pages (Header & Footer) | PASS    | P2 | Logo images use alt="ElectricPe" — correct and consistent.                                                                                                                                                              | No change needed.                                                                                                                                                                                                                                                     | N/A                                                                                                                |

Address in Bengaluru Karnataka.                                                                                           | No change needed.                                                                                                                                                                                                        | N/A                                                                                                            |
| Security & HTTPS         | HTTPS Implementation                      | All Pages (both domains)     | PASS    | P1 | Both electric-pe.vercel.app and electricpe.com use HTTPS. Vercel provides automatic SSL.                                                                                                                                | No change needed.                                                                                                                                                                                                        | N/A                                                                                                            |
| Security & HTTPS         | Mixed Content Risk                        | All Pages                    | UNKNOWN | P2 | OG image URLs point to https://electricpe.com/og/default.jpg (cross-domain HTTPS). This is fine but verify the production domain image URLs are all HTTPS — no HTTP image sources.                                      | Audit all image src and og:image values for HTTP references. Run Chrome DevTools > Security tab to check for mixed content warnings.                                                                                     | Mixed content causes browser security warnings and can prevent page load on strict browsers                    |
| Pagination & Blog        | No Pagination on Blog Index               | /blog                        | WARNING | P2 | Blog has 11+ posts but no visible pagination rel=next/prev or infinite scroll with canonical handling. If more posts are added all must remain accessible.                                                              | Implement standard pagination (/blog/page/2) with rel="next" and rel="prev" link tags OR use a Load More button that keeps all posts server-rendered for crawlability. Avoid infinite scroll with client-only rendering. | Paginated blog posts beyond page 1 may not be crawled or indexed without proper pagination signals             |
| Pagination & Blog        | Blog Post Dates                           | /blog                        | PASS    | P2 | All blog posts include visible publish dates and author names. Dates are human-readable (5 Apr 2026). Good for freshness signals.                                                                                       | Consider adding dateModified schema alongside datePublished in Article schema.                                                                                                                                           | N/A                                                                                                            |
| Technical Infrastructure | Framework                                 | Entire Site                  | INFO    | P3 | Built on Next.js (confirmed by _next/image URLs and meta-next-size-adjust tag). Deployed on Vercel. SSR/SSG-capable framework — good technical foundation for SEO.                                                      | Leverage Next.js Static Site Generation (getStaticProps) for all product and blog pages to ensure fast TTFB. Avoid client-side-only rendering for SEO-critical content.                                                  | N/A                                                                                                            |
| Technical Infrastructure | JavaScript Dependency for Content         | All Pages                    | WARNING | P1 | Dynamic counters ("0+ Happy Owners" "0+ Mobility Centers") are rendered as "0+" in the HTML — JavaScript animates them to real values. Google sees "0+" if JS doesn't execute.                                          | Pre-render the actual numbers in HTML (server-side) and use CSS animation. Google can render JS but this is fragile — stats showing as 0 in a crawl is a serious E-E-A-T signal failure.                                 | Google crawling "0+ Happy Owners" looks like no customers at all — devastating trust signal                    |
| Technical Infrastructure | Savings Calculator — Client-Side Only     | /savings                     | WARNING | P1 | The savings calculator appears to be fully client-side (React state). If the output pages (/savings?city=bengaluru&km=25) are not server-rendered they won't be indexed.                                                | Assess whether /savings calculator result pages should be indexed. If yes implement SSR for the result state. If no add noindex to /savings.                                                                             | Potential indexation of low-value parameterized URLs (/savings?city=X&km=Y&price=Z) creating thin content URLs |
| Technical Infrastructure | URL Parameters Creating Duplicate Content | /book-test-ride and /savings | WARNING | P2 | CTAs throughout the site link to /book-test-ride?model=xypro-lithium-ion and /savings?city=bengaluru&km=25&price=103&veh=2w. If these parameter URLs are indexed they create thousands of thin-content duplicate pages. | In GSC URL Parameters tool tell Google these parameters don't change page content. Alternatively canonicalize all parameter variations to /book-test-ride and /savings respectively.                                     | Crawl budget wasted on parameter URLs; thin/duplicate content penalization risk                                |
