

1. Overall Website Vision

1.1 What the Website Must Achieve

Job	What it means in practice
Build trust before the customer walks into a store	Most buyers will visit the website 2-3 times before visiting a store. The site must answer their doubts — about battery life, service, reliability — before they even ask.
Drive a specific action (not just inform)	Every page must lead the visitor to one of three actions: Book a Test Ride, Find a Store, or Call Us. Information without a next step is wasted.
Differentiate from competitors without shouting	ElectricPe's edge is service and trust — not the flashiest specs. The site must communicate this quietly and consistently through every design and content choice.

1.2 Brand Positioning Statement

ElectricPe is the electric scooter brand that stays with you after the sale. We are not just selling a vehicle — we are offering a complete ownership experience backed by real stores, real people, and real service.

In one line for the developer and designer to keep in mind throughout the build:

"Trustworthy EV for everyday India — not a startup promise, but a store you can walk into."

1.3 Emotional Messaging — What the Customer Should Feel

Stage of visit	Emotion we want to trigger	How
First 5 seconds (hero banner)	Aspiration + recognition	Show a real person — not a model — riding in a familiar Indian setting. Morning commute. School run. Delivery route.
Scrolling the homepage	Confidence and calm	Structured, uncluttered layout. Every claim backed by a number or a proof point. No hype.
Product page	Excitement tempered by practicality	Beautiful scooter visuals BUT immediate clarity on range, charge time, and service locations.
Before taking action	Safety and trust	Service guarantee prominently visible. Warranty terms in plain language. Store address, not a contact form.
After taking action	Relief and anticipation	WhatsApp confirmation, human follow-up within the hour, store address and name of person to meet.

1.4 Functional Messaging — What the Website Must Communicate

- ElectricPe has physical stores — you can walk in, touch, test, and return if needed
- The scooters are practical for daily use — not a niche or experimental product
- No licence required for low-speed EVs — this is a genuine legal advantage, make it visible
- Savings vs petrol are real and calculable — give customers a number, not a vague claim

- Service is not an afterthought — it is the product
- EMI options make it accessible to the price-sensitive buyer

SECTION 2 — TARGET AUDIENCE

2. Target Audience

Low-speed EV scooters in India are bought by a specific cluster of people. Understanding them precisely prevents the mistake of building a website for an imaginary aspirational customer instead of the real one.

2.1 Primary Buyer Profiles

Profile	Who they are	Primary motivation	Key fear
The Daily Commuter	Office-goer, 22-40 years, commutes 15-30 km/day in a city or town	Save on petrol. Petrol costs ₹200-400/week. EV costs ₹15-30/week to charge.	What if the battery dies mid-route? What if I can't find a service centre?
The Household Second Vehicle	Homemaker or family member needing a vehicle for local errands. Often the one at home while spouse takes the car.	Independence and convenience. No waiting for a lift. No petrol queues.	Is it safe? Is it easy to ride? What if something breaks and my husband is not around?
The First-Time Vehicle Buyer	Young adult, 18-25, student or first job. Cannot afford a petrol bike with insurance and fuel costs.	No licence required (low-speed). Affordable. Modern.	Will it look embarrassing? Is the brand credible? What happens if it breaks?
The Small Business / Delivery Operator	Last-mile delivery, small shop owner, grocery delivery, tiffin service.	Dramatically lower running cost. No fuel volatility.	Durability. Can it carry load? What is the range on a full charge?
The Gig Economy Rider	Swiggy, Zomato, Zepto delivery partner or similar.	Operational cost reduction. Petrol is killing margin on each delivery.	Range anxiety. Charging infrastructure. Speed — is it fast enough for delivery SLAs?

2.2 The Fears That Stop the Sale

These fears are more important than the motivations. A buyer who wants an EV but is afraid will not buy. The website must address each fear directly — not bury it.

Fear	How common	Website must say
Battery will die mid-journey	Very high	Actual range per charge, clearly stated. Real-world range (not lab range). Charging time in hours. Nearby charging points if applicable.
Service will be impossible to find	Very high	List of service centres on every page footer. Dedicated service page. Guarantee language: 'Service within 24 hours at any ElectricPe store.'
No one will repair it if something goes wrong	High	Named warranty. Parts availability statement. In-house trained technicians — not outsourced.

It is not a real brand — just an import with stickers	High	Indian registered company. Physical stores (not just a website). Years of operation. Real customer testimonials with faces and names.
The speed is too slow — people will overtake me	Medium	Clear honest speed statement. Framing: 'Built for city speed limits — safe, legal, and sufficient for daily use.'
EMI will be complicated or trap me	Medium	Simple EMI calculator on product page. Partner bank names. No hidden charges statement.

SECTION 3 — CORE DIFFERENTIATION

3. Core Differentiation of ElectricPe

Most EV brands compete on speed, range, and design. ElectricPe must compete on trust, service, and the physical store experience. This is not a weakness — it is the most powerful differentiator in a segment where customers are afraid of being abandoned after the sale.

3.1 The Four Pillars of Differentiation

Pillar	What it means	How to show it on the website
Physical store presence	ElectricPe has real, walk-in stores — not just a website and a phone number. This is rare in the EV segment.	Store count prominently on homepage. Store locator as a primary navigation item. Store photos — real stores, not renders. Store executive names and faces where possible.
Service quality and commitment	Trained in-house technicians. Defined service SLAs. Genuine parts. This is the post-sale promise.	Dedicated 'Service Promise' section on homepage. Service page as a top-level page. Specific guarantees with timeframes — not vague language.
Trust over hype	No fake range claims. No fake reviews. No stock photo customers. Real numbers, real people, real stores.	Customer testimonials with name, city, and photo. Video testimonials if possible. Avoid stock imagery entirely.
Accessibility and human support	Real phone number answered by real people. WhatsApp support. Follow-up after test ride. Customer remembers their store executive's name.	Phone number in top navigation — not buried in footer. WhatsApp chat button on every page. 'Visit us' language over 'Contact us' language.

3.2 Competitive Differentiation Statement (for website copy)

"Most EV brands will sell you a scooter and wish you luck. ElectricPe is different. We have stores you can walk into, technicians who know your vehicle, and a service promise we put in writing. Your scooter is not the end of the relationship — it is the beginning."

SECTION 4 — HOMEPAGE: SECTION-BY-SECTION BREAKDOWN

4. Homepage — Complete Blueprint

The homepage is not a product catalogue. It is a trust-building and conversion journey. Each section has a single job. The sequence is deliberate: aspiration, then proof, then product, then reassurance, then action.

Section HP-01

Hero Banner

Objective	Instantly communicate what ElectricPe is and create emotional connection with a real, relatable image.
Key message	An affordable, reliable electric scooter for everyday Indian life — backed by real stores and real service.
Headline	Electric. Affordable. Yours for life.
Subheadline	India's most trusted low-speed EV scooters — with stores across the city and service you can count on.
UI type	Full-width auto-rotating banner (max 3 slides). Each slide = a different customer profile (commuter, homemaker, delivery rider). Real photography — real Indian streets, real riders.
Primary CTA	Book a Free Test Ride (green button, large, visible above fold)
Secondary CTA	Find a Store Near You (outlined button)
Trust bar below banner	[X]+ Happy Owners [Y]+ Stores 3-Year Warranty No Licence Required

Section HP-02

Why ElectricPe — The Service Promise

Objective	Address the #1 fear immediately: what happens after I buy? Establish the service differentiation before showing any products.
Key message	We are not just selling a scooter — we are committing to your ownership experience.
Headline	We're with you long after you ride out of our store.

UI type	4-card horizontal row with icon + heading + 1-line description each. Large, spacious, not cluttered.
Card 1	Real Stores, Real People — Walk into any ElectricPe store. No chatbots, no waiting. A trained executive who knows your vehicle.
Card 2	Service in 24 Hours — Bring your scooter to any of our stores. We guarantee service within 24 hours of your visit.
Card 3	3-Year Warranty, No Conditions — Not the fine-print kind. Every vehicle comes with a clear, written warranty covering motor, battery, and controller.
Card 4	Genuine Parts, Always in Stock — We stock our own parts. No waiting 3 weeks for a component to arrive from a warehouse.
CTA	See Our Full Service Promise (text link, no button pressure needed here)

Section HP-03

Product Showcase

Objective	Show the range of scooters. Not every detail — just enough to intrigue and push towards the product page.
Key message	There is an ElectricPe scooter for every need and every budget.
Headline	Find your perfect ride.
Subheadline	From daily commutes to delivery runs — a range built for real Indian life.
UI type	Horizontal scrollable card row on mobile. 3-column grid on desktop. Each card: scooter image + name + key stat (range per charge) + starting price + one CTA.
Card content	[Scooter Image] [Model Name] Range: X km per charge Starting ₹XX,XXX [View Details] [Book Test Ride]
Filter bar above cards	Use: All / Daily Commute / Delivery / Student / Family (not technical filters here — that belongs on the listing page)
CTA	Explore All Models (links to Product Listing Page)

Section HP-04

Savings Calculator

Objective	Convert the abstract idea of saving money into a personal, tangible number. This is the most powerful conversion tool on the homepage.
------------------	--

Key message	Switching to electric is not just good for the planet — it puts real money back in your pocket every month.
Headline	How much will YOU save every month?
UI type	Interactive calculator. 3 inputs: (1) How many km do you ride per day? (2) Current vehicle type — petrol 2-wheeler, petrol 3-wheeler. (3) City petrol price — auto-populate or let user adjust. Output: Monthly savings in rupees + Annual savings + Payback period in months.
Design note	Make the output number large and bold. ₹2,400/month saved is far more motivating than 'saves up to 80% on fuel costs'. Do the maths for them.
CTA below calculator	Start Saving Today — Book a Test Ride (primary green button)

Section HP-05

Store Presence & Trust Indicators

Objective	The physical store is ElectricPe's biggest trust asset. Make it visible. Most competitors are online-only or through scattered dealers. ElectricPe has real branded stores.
Headline	Visit us. We are here.
Subheadline	[X] ElectricPe stores across India — walk in, test ride, ask anything.
UI type	City pill tabs (Chennai, Bengaluru, Hyderabad, etc.) + embedded Google Map showing store pins + store card below map (store name, address, hours, phone number, Get Directions button).
Trust strip	Above the map: real store photographs — not renders. Show the interior, the service area, the team.
CTA	Find My Nearest Store (links to full Store Locator page)

Section HP-06

Customer Testimonials

Objective	Social proof. Real people, real names, real cities. Addresses the specific fears around battery, service, and reliability — not generic 'great product' reviews.
Headline	Real riders. Real stories.

UI type	3-card carousel on mobile. 3-column grid on desktop. Each card: real photo of customer (face visible) + name + city + vehicle model owned + quote addressing a specific fear. Star rating optional but keep it authentic — 4.6 is more credible than 5.0.
Sample testimonial framing	'I was worried about service. Three months in, I had a minor issue. The store resolved it the same day. I didn't even need to leave my vehicle overnight.' — Priya S., Chennai, ElectricPe Gust owner
Source note	Source testimonials from real CRM records. Show WhatsApp review screenshots if available — they are more credible than designed cards.
CTA	Read More Stories (links to dedicated testimonials page or Google Reviews)

Section HP-07

Comparison Strip vs Petrol

Objective	Handle the rational objection: 'Why not just buy a petrol bike?' Answer it directly and confidently — do not avoid the comparison.
Headline	ElectricPe vs petrol. You decide.
UI type	Simple 2-column table — ElectricPe vs Petrol Scooter. 5-6 rows covering: Fuel cost per month, Maintenance cost per year, Licence required, Noise, CO2 emissions, Resale considerations. Keep it honest — do not manipulate the numbers.
Design note	ElectricPe column in green with checkmarks. Petrol column in neutral gray. Do not use red crosses for petrol — it looks antagonistic. Use neutral dashes or honest numbers.
CTA	Still not sure? Talk to us — Call [number] or Book a Free Test Ride

Section HP-08

EMI and Finance Section

Objective	Remove the price barrier. Many buyers see the sticker price and assume it is out of reach. Show the monthly cost immediately.
Headline	Own an ElectricPe starting at ₹X,XXX per month.
UI type	Clean finance strip. Partner bank logos. Simple EMI examples: 'Starting from ₹1,999/month on 24-month EMI.' Link to full EMI calculator.
Sub-message	Zero down payment options available at select stores. Instant finance approval for salaried individuals.

CTA	Calculate My EMI (opens calculator modal or links to product page with EMI tool)
-----	--

Section HP-09

Final Homepage CTA Strip

Objective	Last chance to capture the visitor before they leave. Clear, direct, no distractions.
-----------	---

Headline	Ready to make the switch?
----------	---------------------------

UI type	Full-width coloured strip. Three action blocks side by side: (1) Book Test Ride — form or WhatsApp link. (2) Find a Store — location search. (3) Talk to Us — phone number and call hours.
---------	--

Design note	No paragraph text. Just headline + 3 large action buttons. Every word earns its place here.
-------------	---
